

IN THE CLAIMS

1. (Currently Amended) A method comprising:
 - allowing the use of content on a content receiver;
 - collecting information about a characteristic of at least one of the hardware and software that is present on the receiver;
 - providing that information to a remote processor-based system to select, from an ~~advertising a database, an~~ of advertising resources, a subset listing of advertising resources and guidelines for distributing advertising materials on said receiver that is based on the characteristic of the receiver;
 - receiving the ~~advertising-subset listing of advertising resources and guidelines on~~ the receiver to ~~selectively choose an advertisement from the advertising subset for storage; and~~ selectively choosing an advertising resource from the subset listing based on a characteristic of the receiver;
 - capturing an advertisement corresponding to the chosen advertising resource to store the advertisement on said content receiver; and
 - in response to detecting a pause in content usage, automatically interrupting the use of content to temporarily replace the content with an a previously stored advertisement.
2. (Currently Amended) The method of claim 1 including combining the ~~advertising subset listing of advertising resources~~ with advertising resources available on the receiver.
3. (Previously Presented) The method of claim 1 wherein collecting information includes monitoring the activities of the user of the receiver.
4. (Previously Presented) The method of claim 3 wherein collecting information includes developing a database of information about activities undertaken by the user of the receiver.
5. (Currently Amended) The method of claim 4 wherein receiving the subset listing of advertising resources includes receiving a subset listing of advertising resources from a

database of advertising resources including selecting advertisements stored on said remote processor-based system based on information about the user of the receiver.

6. (Currently Amended) The method of claim 5 including compiling a local electronic guide to advertising resources ~~by accessing~~ to use to capture advertisements available on said ~~a~~ remote processor-based system.

7. (Original) The method of claim 1 including determining a characteristic of advertising and comparing said characteristic to information about the use of the receiver.

8. (Currently Amended) The method of claim 1 including ~~enabling~~ storing a variety of content on the content receiver to ~~be selected~~ select for play at any time.

9. (Original) The method of claim 1 including automatically replacing the content with advertising after allowing content to be used for a predetermined amount of time.

10. (Currently Amended) The method of claim 1 including ~~automatically determining at predetermined~~ controlling the number of times whether to replace the a user may access content that is stored on the receiver.

11. (Currently Amended) An article comprising a medium for storing instructions that enable a receiver to:

allow the use of content on the system;

in response to detecting a pause in content usage, automatically interrupt the use of the content;

while said content usage is paused, enable the system to temporarily replace the content with advertising;

collect information about characteristics ~~of at least one of the hardware and software that is present on~~ of the receiver;

provide the information to a remote processor-based system to select, from an ~~advertising a database, an~~ of advertising resources, a subset listing of advertising resources and guidelines for using advertising materials ~~for use~~ in connection with the receiver; and

receive the ~~advertising~~ subset listing of advertising resources and guidelines on the system ~~to selectively choose an advertisement from the advertising subset for storage;~~

selectively choose an advertising resource from the subset listing based on a characteristic of the receiver; and

capture an advertisement corresponding to the chosen advertising resource to store the advertisement on said content receiver.

12. (Currently Amended) The article of claim 11 further storing instructions that enable the receiver to ~~enable~~ store a variety of content on the receiver to ~~be selected~~ select for play at any time.

13. (Original) The article of claim 11 further storing instructions that enable the receiver to monitor the activities of the user of the receiver.

14. (Original) The article of claim 13 further storing instructions that enable the receiver to develop a database of information about activities undertaken by the user of the receiver.

15. (Original) The article of claim 14 further storing instructions that enable the receiver to select advertisements stored on the remote processor-based system based on information about the user of the receiver.

16. (Currently Amended) The article of claim 15 further storing instructions that enable the receiver to compile a local electronic guide to advertising resources ~~by accessing to~~ use to capture advertising available on ~~the~~ a remote processor-based system.

17. (Original) The article of claim 11 further storing instructions that enable the receiver to determine a characteristic of advertising and compare the characteristic to information about the use of the receiver.

18. (Original) The article of claim 11 further storing instructions that enable the receiver to automatically replace content with advertising after allowing content to be used for a predetermined amount of time.

19. (Original) The article of claim 11 further storing instructions that enable the receiver to automatically determine at predetermined times whether to replace said content.

20. (Currently Amended) The article of claim 11 further storing instructions that enable the receiver to automatically compile a receiver-based database of advertising resources.

21. (Currently Amended) A system comprising:
a receiver that receives the transmission of content, said receiver including a shell to enable the use of content to be paused ~~interrupted~~ and temporarily replaced with a previously stored advertising; and

storage coupled to said receiver storing instructions that enable said receiver to determine information about a characteristic of ~~at least one of the hardware and software that is present on~~ the receiver, receive, from a remote processor-based system, a subset listing of advertising resources and guidelines for distributing advertising materials on the receiver, the subset listing of advertisements based on the information about ~~the use of~~ the receiver, and use the information to selectively choose an advertisement advertising resource from the subset listing, and capture an advertisement corresponding to a chosen advertising resource to store the advertisement on the receiver.

22. (Original) The system of claim 21 wherein said system is a television receiver.

23. (Original) The storage of claim 21 wherein said receiver automatically replaces the content with advertising after allowing content to be used for a predetermined amount of time.

24. (Original) The system of claim 21 wherein said receiver automatically determines at predetermined times whether to replace the content with advertising.

25. (Original) The system of claim 21 wherein the receiver enables a variety of content to be selected for play at any time.

26. (Original) The system of claim 21 wherein said storage stores instructions that enable the receiver to monitor the activities of the user of the receiver.

27. (Original) The system of claim 26 wherein said storage stores instructions that enable the receiver to develop a database of information about activities undertaken by the user of the receiver.

28. (Original) The system of claim 21 wherein said storage stores instructions that enable the receiver to access a database of available advertisements on a remote processor-based system.

Claim 29 (Canceled).

30. (Currently Amended) The system of claim 21 wherein said storage stores instructions that enable the receiver to compile a local electronic guide to advertising resources to use to capture by accessing advertisements available on the remote processor-based system.

31. (Previously Presented) The system of claim 21 wherein said storage stores instructions that enable the receiver to access a database of available advertisements on a specialized, remote processor-based system.

32. (Previously Presented) The system of claim 31 wherein said storage stores instructions that enable the receiver to access a database of available advertisements on a remote processor-based system specialized for a language other than the national language spoken in the location of said receiver.
